

THERMOPORTS

Thermoports are double-walled, insulated and stackable plastic containers that are ideal for transporting hot or cold food or beverages. Meals or beverages get directly to the serving point in compliance with hygiene requirements.

Thermoports are very robust, dishwasher-proof (up to +90 °C) and Gastronorm (GN) compatible. They can therefore carry a variety of GN containers with a watertight press-in lid. This is an ideal way to keep food or beverages hot and guarantee hygienic transport.

The Thermoports are named according to the corresponding Gastronorm (GN) container. For example, the GN container 1/1 fits into the Thermoport 1/1. The Thermoport 1/2 is designed for a GN container 1/2, which also applies to the Thermoport 1/3 and the GN container 1/3.

In addition, we have a Thermoport for beverages, which is equipped with a stainless steel drain cock for convenient beverage dispensing.

Special Features

- Meals are transported safely and hygienically with optimum heat retention
- Double-walled, insulated and stackable
- Vent plugs protect Gastronorm containers from overflowing
- Robust, dishwasher-proof (up to +90 °C), Gastronorm compliant containers
- Antibacterial surface
- CFC-free insulation
